Leírás

This book holds up a distorted mirror to the digital world, exposing the social, human, ethical, and power-related shadows of technological progress – confronting truths many would rather ignore. Technology is not merely a tool; it is a power structure that steadily weaves itself into every aspect of our lives.

While the digital world promises convenience, it quietly dismantles privacy, manipulates thought, and reshapes social reality through algorithms. With unflinching clarity, the book reveals how information technology becomes an instrument of surveillance, censorship, and control – whether through artificial intelligence, digital currencies, China's digital leash, or the distorting influence of media.

It raises provocative questions: Is this truly the future we want? Is a few clicks' worth of convenience enough to surrender our freedom? This is not just a warning – it's a wake-up call. A book for those unafraid to face the dark consequences of the digital age, and willing to reconsider the role of technology in their lives.

TABLE OF CONTENTS

Foreword	6
1. Technology pros and cons	9
1.1. The psychology of technological dependence	9
1.2. Blind faith in infrastructure	11
2. The publicisation of private life	17
2.1. Tracking our whereabouts	17
2.2. The end of privacy and traceability	19
2.3. Violation of children's rights	22
2.4. Reuse of data by third parties	22
2.5. Digital surveillance and algorithmic profiling	23
2.6. Social ranking and scoring	25
2.7. The permanence and repercussions of the digital past	25
2.8. The erosion of private relationships	27
3. Digital control	29
3.1. Dictatorship and democracy	29
3.2. China's digital leash	32
3.3. The Indian Aadhaar card	41
3.4. Digital citizenship	44
3.5. Land registry digitisation	47
3.6. The Canadian truckers' protest	51
3.7. The Russian SORM surveillance system	53
3.8. SORM clones in other countries	54
3.9. Facial and biometric surveillance	56
3.10. Pegasus spyware scandal	58
3.11. Surveillance of judges and prosecutors in Poland	59
3.12. Australian COVID app	59
3.13. Algorithm determining academic results in England	59
3.14. SyRI algorithmic profiling in the Netherlands	60
3.15. Palantir and immigration surveillance – USA	60
3.16. Facebook and disinformation in the Ethiopian conflicts	61
3.17. French artificial intelligence in the hunt for social media tax evasion	61
3.18. Dashcams and digital penalties	62
4. The digitisation of the monetary system	64
4.1. The risks of the current monetary and banking system	71
4.2. Is our money safe?	72
4.2.1. 2007 cyberattack in Estonia	74
4.2.2. The 2013 Cypriot bank run	76
4.2.3. Australian pension fund data loss	77
4.3. Cryptocurrencies	79
4.3.1. Advantages and disadvantages of cryptocurrencies	83
4.4. Digital yuan and euro	84
4.5. Bank fraud	87
4.5.1. Phishing, smishing, vishing	88
4.5.2. Fake websites and applications	89
4.5.3. Caller ID spoofing	90
4.5.4. Remote access scam	91
4.5.5. Romantic and investment scams	92
4.5.6. Deepfake and artificial intelligence-based fraud	92
4.5.7. Marketplace and parcel delivery scams	92
4.5.8. Other dangers	93
4.6. When security becomes a business interest – the illusion of financial control	95
4.7. Why did the classic economic models disappear?	97
5. Hacking capitalism	99
6. The degeneration of language	102
7. Artificial intelligence	105
8. Automatic weapon systems	114
8.1. Cyber warfare and digital wars	118
9. Online crime	121
9.1. Classic computer crimes	123
9.2. Digital fraud and financial abuse	124
9.3. Distribution of illegal content	126
9.4. Targeted attacks and political manipulation	127
9.5. Online harassment and digital abuse	128
9.6. Online radicalisation and sects	129
9.7. International cooperation and legal challenges	131
10. The darknet	132

- 10.1. The anatomy of the darknet 132
- 10.2. Criminal content on the darknet 134
- 10.3. The good side of internet anonymity 136
- 10.4. The algorithmisation of morality 137
- 10.5. The authorities and the cat-and-mouse game 138
- 10.6. The social impact of the darknet 139
- 10.7. Visions of the future 141
- 11. Media and manipulation 143
 - 11.1. The loss of credibility 143
 - 11.2. The power of the media and marketing 144
 - 11.3. Digital censorship and manipulation 145
 - 11.4. The displacement of independent journalism 148
 - 11.5. Algorithmic reality shaping and the bubble effect 149
 - 11.6. Micro-targeting and the industry of digital influence 150
 - 11.7. The attention economy: clicks, sensationalism, distortion 150
 - 11.8. The blurring of reality 152
 - 11.9. Platforms as new centres of power 152
 - 11.10. Information overload 153
- 12. The dominance of technology companies 154
 - 12.1. Loss of sovereignty and digital colonisation 155
 - 12.2. The rise of digital empires 155
 - 12.3. New forms of power 156
 - 12.4. Data as raw material 157
 - 12.5. The paradox of regulation 158
 - 12.6. The digital world order: a new logic of power 158
- 13. The transformation of the labour market and digital poverty 160
 - 13.1. Automation and algorithmic work 160
 - 13.2. New forms of digital poverty 161
 - 13.3. Platform workers and invisible work 161
 - 13.4. Education and digital mobility 162
 - 13.5. The future of work: utopia or dystopia? 162
- 14. The environmental impact of the digital ecosystem 165
- 15. Complacency, dumbing down 167
 - 15.1. Digital addiction 167
 - 15.2. Simplified information processing 170
 - 15.3. Digital addiction and attention deficit 171
 - 15.4. The emptying of social relationships 172
 - 15.5. The devaluation of offline existence 173
 - 15.6. Grey-zone web shops 174
 - 15.7. Artificial intelligence as a substitute for thinking 175
 - 15.8. The downsides of digital education 176
 - 15.9. Digital parenting and the generation gap 177
- 16. Freedom for security 178
- 17. The price of anonymity 180
- 18. Body image distortion and dating problems 182
- 19. Digital addiction 191
